DUNGEONS & DRAGONS

What is Dungeons and Dragons?

Overview of D&D

- Tabletop Role-Playing game
- Evolved from wargames
- 1 “Dungeon Master”
- Several Players
- D&D 3.5e

Okay, roll Athletics to see how well they do that.

That's high enough. Your character successfully climbs the wall.

I want my character to climb the wall.

I rolled a 19.

Concept

- CharacterSmith3.5e is a java applet which is designed to assist DMs and players of dungeons and dragons create and design characters.
- It will facilitate the character making process, by providing easy access to the different options which are available to players during character creation
- Will also users to randomize a majority of their character, so that DMs can create unique and new NPCs quickly and efficiently

- Choose attribute - Will be used to allow user to assign different traits to their character such as ability scores, feats, class features etc.

Functional Requirements

- Randomize attribute - Allows user to cause an attribute to be selected randomly
- Level skills - Will assist character in leveling skills using skill points
- View final character - Allows the user to view the fully created character
- Export final character - exports the created character sheet to PDF

Use Cases and Use Case Diagram

System Constraints

- Using Java
- Plan on making it a downloaded applet
- Plan on using website to distribute

Evolutionary Features

Functional Requirements:

- Save character - allows created character to be saved in applet long term
- View saved characters - allows user to look through previously created characters

Non Functional Requirements:

- Saved character Database - stores previously made characters in the applet
